Appendix D: Sensitivity analyses and computational efficiency assessment

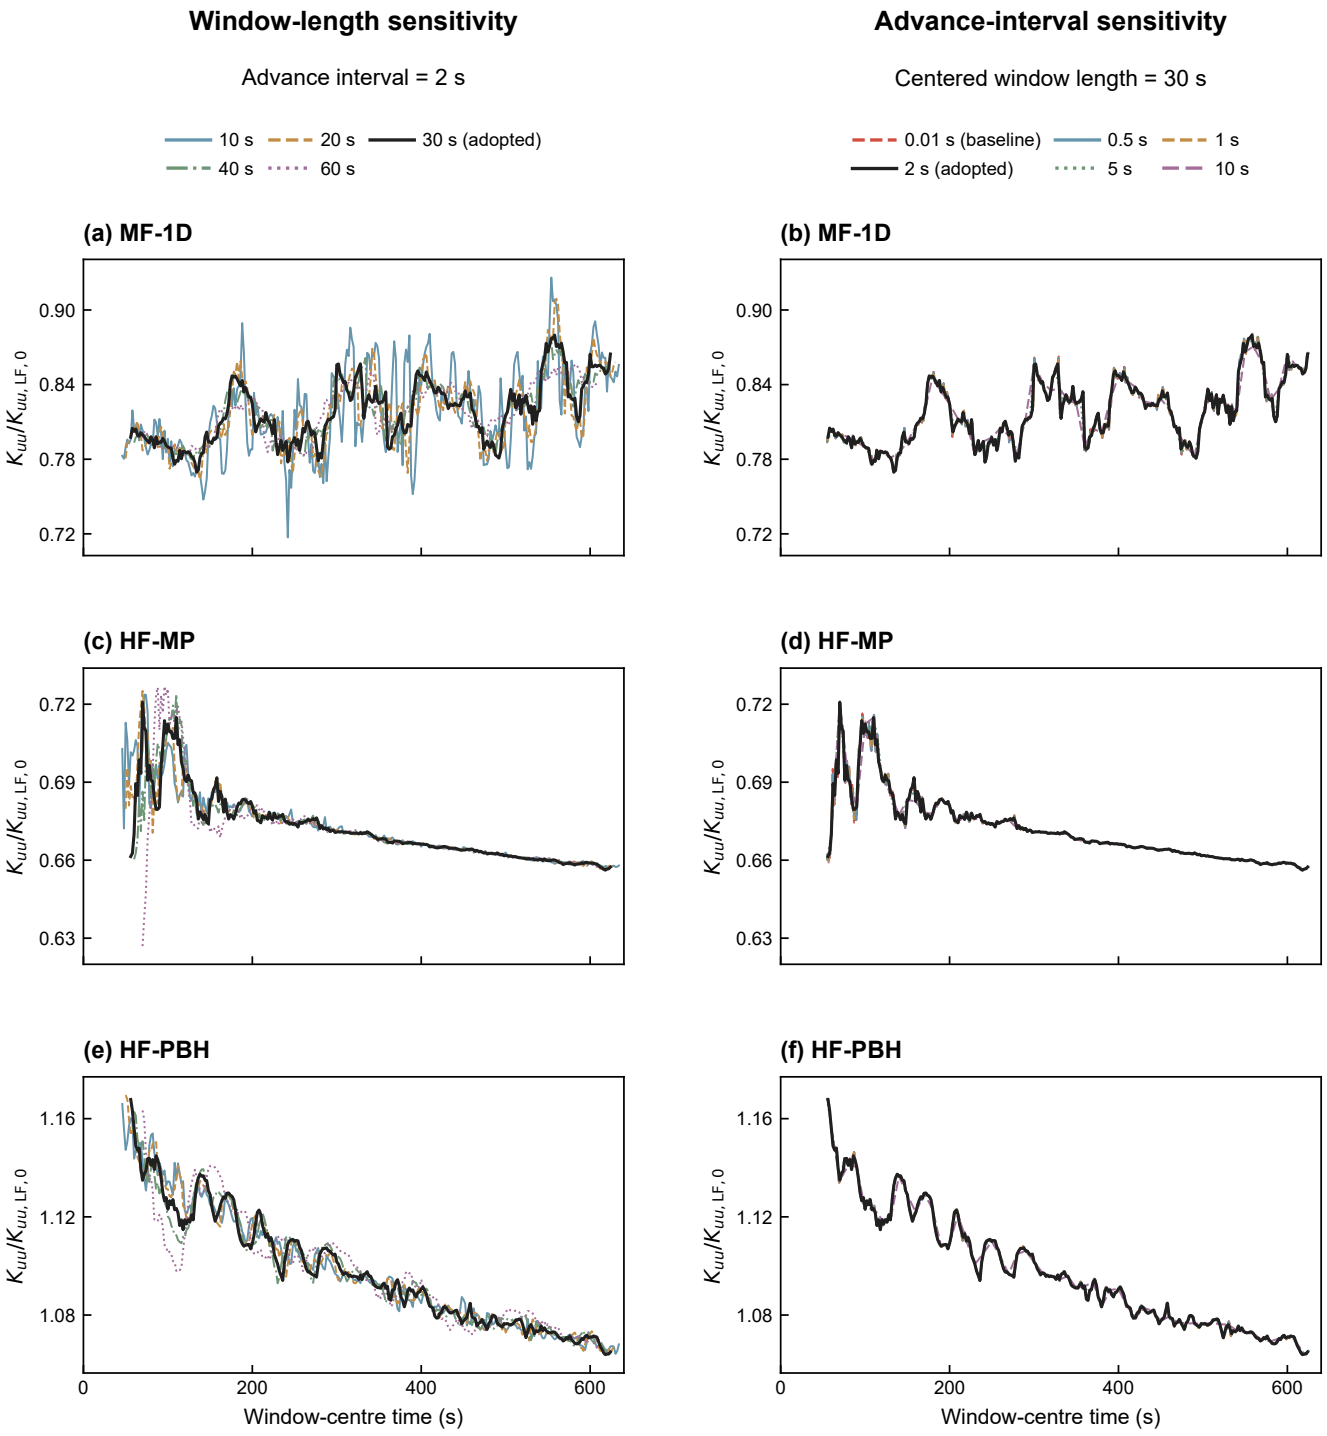

Figure D.2. Sensitivity of identified foundation stiffness to window length and advance interval. (a, c, e) Window-length sensitivity at a fixed 2-s advance. (b, d, f) Advance-interval sensitivity with a fixed 30-s centered window. Rows show MF-1D, HF-MP and HF-PBH, respectively. The adopted 30-s window and 2-s advance are highlighted in black.
